

Westminster Abbey case study

Protecting your world

Project Overview

Chubb Fire & Security has installed an access control and entry phone system at Westminster Abbey's Song School, based within the iconic church that has held numerous royal weddings and state ceremonies.

Westminster Abbey is one of the world's greatest churches, with a history stretching back over a thousand years. The Song School, set in the heart of the Abbey precincts, exists solely to educate and care for approximately 30 boys who sing as choristers in the Abbey Choir, offering a unique musical and educational experience.

Customer Needs

- A reliable and proven provider of security solutions to ensure the safety of students and staff.
- Installation of an access control system so that only those with specific passes can gain entry to particular areas.
- To maintain an up-to-date system through regular equipment servicing.

Solution and Benefit

Chubb's security systems have helped to ensure security through-out the purpose-built Song School for more than 30 years.

As such, it has equipped the state-of-the-art facility, which includes a rehearsal area with various practice rooms as well as offices and a music library for choristers and staff to use, with access control and a door entry system, ensuring that only authorised individuals are able to enter. Furthermore, the new installation is integral to the facility's existing intruder system, which Chubb monitors 24/7.

Project Summary

Garry Evanson, head of security and emergency planning, Westminster Abbey, said that the trust established with Chubb over three decades is essential:

"Chubb's expert knowledge and recognised customer focus are major factors in the longevity of the contract we have had together," he said. "We have always worked with one point of contact and it is this trust, as well as the ease and speed of resolving any issues we may have, that are the bedrock of the excellent service we receive."
