

## Waltham Forest College case study

### Protecting your world

#### Project Overview

Waltham Forest College has chosen a remotely monitored CCTV solution from Chubb to protect students, staff and buildings around the clock.

With pressure on the public purse, the College looked for a more cost-effective 24/7 security solution, and Chubb proposed enhancing the use of its existing camera installation by adding remote monitoring, allowing skilled operators within a dedicated monitoring station to see and respond if an incident occurs.

#### Client Needs

- To maintain the highest standards of security, protecting students, staff and property.
- Reduction of costs whilst maintaining an efficient and effective security solution.
- To deliver a remote monitoring service to protect the site 24/7.

#### Solutions & Benefits

The solution utilises the college's more than 100 security cameras, enabling operators to control what the cameras see and respond to, either by issuing a verbal warning or by calling the police. The technology also allows cameras to record video that can be used as evidence after an incident occurs.

*"As we go through a period of cost savings, it is essential that we maintain a tight grip on our security protection,"* said Mark Cumberbatch, Head of Security, Waltham Forest College.

Chubb also monitors the college's intruder alarm system and ensures that both the intruder and CCTV systems are fully integrated. Its contract with the college also includes servicing and maintaining all of the security cameras on site.

*"As part of our ongoing contract, Chubb will replace obsolete equipment with the latest technologies,"* Cumberbatch added.

#### Project Summary

*"Chubb's history of providing security services has always proven positive,"* Cumberbatch continued. *"Chubb's service from installation to aftercare is excellent."*
